OBJECTIVE

Experienced Senior Database Administrator seeking to leverage my extensive expertise in installing, configuring, and maintaining Microsoft SQL Server instances, designing and implementing high-availability and disaster recovery solutions, and ensuring optimal database performance. With a strong background in database administration, performance tuning, backup and recovery, and team collaboration, I aim to contribute to the continuous improvement of database systems. I am skilled in working with cross-functional teams to provide database expertise and support, mentor junior DBAs, and manage multi-cloud platform environments. My goal is to be a valuable asset to the company by bringing the knowledge and experience I have developed over the years.

Able to be a co presenter at Snowflake User group and **Featured Member** of DFW Snowflake group for the month of March.

SUMMARY

- Over 12 years of experience in SQL Database Administration, Development, and Application Support.
 - Expertise in T-SQL, database objects, indexing, and performance tuning.
 - Skilled in High Availability (HA) environments: Clustering, Mirroring, Log Shipping, Always On, and Replication.
 - Proficient in Azure cloud administration, migration, and automation.
 - Extensive experience with Azure Data Factory, Databricks, DevOps, and AD Connect.
 - Automated routine DBA tasks and configured alerts using Powershell (DBATools).
 - Implemented and administered Snowflake, including migrations and security management.
 - Experience with MySQL, including installation, performance tuning, and backups.
 - Strong background in data migration, ETL processes, and database security.
 - Proficient in using monitoring tools such as Spotlight, Foglight, Idera, SentryOne, and Redgate.
 - Excellent interpersonal, analytical, and communication skills.
 - Proficient in GitHub, Alteryx, Visual Studio Code, Azure Data Studio, and Docker.
-

EDUCATION

BSc. in Computer Science

Hilcoe School of Computer Science

Associate Degree in Electrical Engineering

Addis Ababa Technology Faculty

CERTIFICATIONS

- SnowPro Core Advanced Engineering

- Azure Data Engineer Associate
- Azure SQL Database Administrator
- Snowflake SnowPro Core Certified
- Designing and Implementing Microsoft DevOps Solutions

- Microsoft Certified IT Professional (SQL Administrator)
 - Microsoft Specialist (Windows Azure)
 - Microsoft Certified Technology Specialist (Office 365)
 - Microsoft Certified Professional (SQL Server)
 - AWS Certified
 - Microsoft Certified: Fabric Analytics Engineer
-

PROFESSIONAL EXPERIENCE

Bank OZK

Data Engineering

March 2020 - Present

- Installed, configured, and maintained Microsoft SQL Server instances.
- Worked on designing sqlmonitor(using SQLGuradian tool) using ML(Machine Language) and trained the model and got a functional tool which is also interactive
- Designed and implemented high-availability and disaster recovery solutions (e.g., Replication, Clustering, Log Shipping).
- Monitored database performance, implemented performance tuning, and optimized queries.
- Performed capacity planning and ensured efficient resource utilization.
- Developed, tested, and maintained backup and recovery strategies.
- Ensured database resilience through regular testing of disaster recovery plans.
- Collaborated with developers to design and optimize database schemas, indexes, and stored procedures.
- Provided database expertise during application development and deployment phases.
- Utilized monitoring tools to ensure database health and performance.
- Diagnosed and resolved complex database issues, including performance bottlenecks, replication errors, and deadlocks.
- Maintained comprehensive documentation for database configurations, policies, and procedures.
- Generated and analyzed database performance reports for stakeholders.
- Acted as a mentor and provided technical guidance to junior DBAs.
- Collaborated with cross-functional teams, including developers, system administrators, and business analysts.
- Automated routine DBA tasks and configured alerts using Powershell.
- Migrated SQL databases to Azure and managed Azure cloud environment.
- Synchronized AD users and logins to Azure AD.
- Implemented and administered Snowflake environments, including data migration, security management, and automation.
- Developed and maintained Snowflake data pipelines and ETL processes.
- Optimized Snowflake performance and conducted regular maintenance tasks.
- Ensured Snowflake data security and compliance with organizational policies.

Bank of America, Dallas, TX

Senior DBA

May 2019 - April 2020

- Migrated SQL Server Agent jobs to Autosys and resolved issues.
- Performed performance tuning, query optimization, and documented processes.
- Managed SQL databases in Azure Cloud and implemented automation.
- Configured production and non-production servers and migrated databases to Azure SQL.

HCL America (Walt Disney), Orlando, FL

Lead DBA

May 2017 - February 2019

- Managed SQL Server environments and resolved performance issues.
- Implemented backups, restores, recovery models, and high availability solutions.
- Automated reporting and administrative tasks using Powershell.
- Managed migration of on-premise databases to Azure and AWS.

HCL America, Cary, NC

SQL Database Administrator

September 2015 - February 2017

- Installed and migrated SQL database instances.
- Implemented high availability options and automated scripts.
- Performed troubleshooting, backups, and restores.
- Configured SQL Reporting and created SSIS packages.

NASW (National Association of Social Workers), Washington, DC

SQL DBA/Technical Lead

May 2015 - August 2015

- Created new databases and set up backups.
- Migrated SQL servers and implemented HADR solutions.
- Developed SSIS packages and automated maintenance tasks using Powershell.

Sholla Consulting, Silver Spring, MD

SQL Database Administrator

November 2014 - April 2015

- Installed SQL database instances and implemented security alerts.
- Managed backups, restorations, and performance monitoring.
- Configured Windows and SQL Server clustering for high availability.

SITA Information Network Computing

Database Service Engineer

June 2008 - December 2013

- Installed, configured, and managed SQL Server instances.
- Developed high availability solutions and automated backup systems.
- Enhanced database performance and provided user training.

MEMBERSHIP AND AFFILIATION

North Texas SQL Server User Group

Snowflake Community Group

Database Professionals virtual groups

PROJECT HIGHLIGHTS

- **High Availability and Disaster Recovery:** Implemented AlwaysOn, clustering, and log shipping for business continuity.
- **Azure Cloud Administration:** Managed migrations, configurations, and automation in Azure environments.
- **Powershell Automation:** Automated routine SQL tasks, backups, and monitoring using PowerShell and DBATools.
- **Snowflake Administration:** Managed Snowflake migrations, security, and automation.
- **Database Partitioning:** Improved database performance by partitioning large tables.
- **T-SQL Development:** Developed procedures, created table schemas, and optimized queries for performance.
- Worked on warehouse cost optimization and minimized cost by significant value
- Designed and implemented Snowflake automated performance optimization,Auditing dashboard and Monitoring tool with streamlitApp using COCO
- Designed and Implemented a very protective security and Governance for snowflake environment

TECHNICAL SKILLS

- **Databases:** SQL Server, MySQL, Snowflake,MongoDB
- **Cloud Platforms:** Azure, AWS,Google
- **Tools:** Azure Data Factory, Databricks, Alteryx, Visual Studio Code, Azure Data Studio, Docker, GitHub
- **Scripting:** T-SQL, Powershell,Python
- **Monitoring:** Spotlight, Foglight, Idera, SentryOne, Redgate,Site24x7
